

Press Release: For Immediate Release

EWS Announces Further TR900 Progress and \$1.2 million from Warrant Exercise

Ajax, Ontario, CANADA – (July 26, 2011) – Environmental Waste International Inc. (EWS) (TSXV: EWS) announced that the TR900 Pilot Plant (TR900) has successfully produced electrical power from tire gas. Initial operating parameters were met by blending tire gas and natural gas to produce power that was sent to the electrical power grid. EWS will continue to work with the engine manufacturer to adjust and tune the generator system to allow operation solely from tire gas.

EWS also announced it has received \$1.2 million from the exercise of warrants that were part of the six million unit private placement on July 23, 2009. Each of the six million warrants allowed for the purchase of one common share at an exercise price of \$0.20.

EWS has also designed processors for the environmentally safe sterilization and disposal of medical, biological, liquid and food waste and for the recovery of usable byproducts from other organic sources. EWS continues to explore other applications for its technology. Please visit the EWS webpage on the Internet at: www.ewmc.com for additional information.

WARNING: The Company relies upon litigation protection for “forward-looking” statements. The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
